

# Attack of the Evil SOD WEBWORM!!!

They're back, they're hungry, and they're after your grass! Does your grass look like something has been grazing on it? Shine a flashlight on your grass at night; if you see moths hovering 6 inches over your lawn, it's probably sod webworms! Spray our recommended insecticide every 7-10 days (see an associate for details). Follow up with an application of 15-0-15 to help your lawn bounce back!

## FREE SEMINAR This Saturday 10:00 to 12:00

**"Fairy Gardens" with Mary**  
During this hands-on tutorial, we'll show you exactly how to create one-of-a-kind miniature gardens. Mary will demonstrate the techniques and materials required for creating breathtakingly beautiful fairy gardens. Attendees are welcome to bring (or purchase) their own supplies to create their own miniature garden during the demonstration, with personalized help from Mary!

**Lawn Dying?**  
Is your St. Augustine Grass turning crispy brown? Does it look like hay? Do you have black insects with orange stripes in your centipede? Check the lawn closely. Does it seem to be melting away? Turning yellow? Do the grass blades have spots or splotches? If any of these problems sound familiar, bring us a sample (12x12") with roots attached... **We can help!**

**Soggy Yard?**  
We specialize in helping you resolve your erosion and water problems. Solutions include french drains, underground piping systems, catch basins, dry stream beds, retaining walls, concrete flumes, and landscape berms. **All Work is Guaranteed**
