

Hydrangeas For North Florida

| Cultivar/Common Name/ Hydrangea Specie | Flower Color | Size | Comments |
|--|--|----------------------------------|---|
| Annabelle <i>H. arborescens 'Annabelle'</i> | White | Height of 4-5' and width of 3-4' | Broad rounded inflorescences up to 12 in. in diameter, Blooms on new growth |
| Beni Gaku <i>H. macrophylla serrata 'Beni-gaku'</i> | Emerging white, then darken to pink and finally a true blood red | 4 feet tall and wide | Ancient Japanese variety with unique lacecap flowers on versatile compact plant |
| Blue Wave <i>H. macrophylla 'Blue Wave'</i> | Sea blue sterile flowers, violet fertile flowers | 6 feet tall and wide | Large vigorous plants produce lace cap flowers with sea blue sterile ring and a violet center of fertile blossoms. In more alkaline soils outer ring is pink or lilac. |
| Bluebird Lacecap <i>H. macrophylla serrata 'Bluebird'</i> | Sea blue sterile florets, rich blue fertile flowers | 4 to 6 feet tall and wide | Spectacular lacecap blooms |
| Charm <i>H. macrophylla 'Charm'</i> | Red | 3 to 5 feet tall and wide | Charm is one of the best red colored hydrangeas around. A mop head type which frequently displays good fall colors in red, orange, and yellow |
| Domotoi <i>H. macrophylla 'Domotoi'</i> | Pale to clear blue | 3 to 5 feet tall and wide | Rare new release from Japan! Large heads of large, rounded, pale blue flowers develop to clear blue |
| Endless Summer <i>H. macrophylla 'Bailmer'</i> | Clear blue mop-head blooms that may turn pink in alkaline soils | 5 feet tall and wide | An exciting discovery that flowers on new wood to extend color throughout the season |
| Glowing Embers <i>H. macrophylla 'Glowing Embers'</i> | Deep Rose | 4 feet tall and wide | Blooms a true red regardless of soil pH, mophead type |
| Grayswood <i>H. macrophylla serrata 'Grayswood'</i> | Sterile blooms turn from white to red, fertile florets are bright blue | 6 feet tall | The sterile florets are outward facing white but turning red with age. Ultimately, once the plant has been pollinated, they face downward revealing their red reverses. The fertile florets are bright blue |
| Lanarth White <i>H. macrophylla 'Lanarth White'</i> | Sterile white florets around a large cluster of pink to blue fertile flowers | 3 to 4 feet tall and wide | Broadly rounded form effective in mass plantings or large containers |
| Merrit's Supreme <i>H. macrophylla 'Merrit's Supreme'</i> | Rose-red | 5 to 6 feet tall and wide | Huge rounded clusters of rose-red flowers, Very popular |
